▲ロト ▲母ト ▲目ト ▲目ト 三日 めんの

What do we want?

A simple mathematical model that *faithfully represents* (the agents information in) social interactive situations.

What do we want?

A simple mathematical model that *faithfully represents* (the agents information in) social interactive situations.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose that Ann receives card 1 and card 2 is on the table.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose that Ann receives card 1 and card 2 is on the table.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, \textit{w}_1 \models \textit{KH}_1$ 

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, w_1 \models K H_1$ 

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, w_1 \models K H_1$ 

 $\mathcal{M}, w_1 \models K \neg T_1$ 

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, w_1 \models LT_2$ 

Some Questions

Should we make additional assumptions about R (i.e., reflexive, transitive, etc.)

What idealizations have we made?

▲ロト ▲圖ト ▲画ト ▲画ト ▲画 - のへで

Some Notation

A Kripke Frame is a tuple  $\langle W, R \rangle$  where  $R \subseteq W \times W$ .

 $\varphi$  is valid in a Kripke model  $\mathcal{M}$  if  $\mathcal{M}, w \models \varphi$  for all states w (we write  $\mathcal{M} \models \varphi$ ).

 $\varphi$  is valid on a Kripke frame  $\mathcal{F}$  if  $\mathcal{M} \models \varphi$  for all models  $\mathcal{M}$  based on  $\mathcal{F}$ .

▲ロト ▲掛ト ▲ヨト ▲ヨト 三ヨ - のへで

#### **Fact:** $\varphi$ is valid then $K\varphi$ is valid

Eric Pacuit and Rohit Parikh: Introduction to Formal Epistemology, Lecture 1

### **Fact:** $K\varphi \wedge K\psi \rightarrow K(\varphi \wedge \psi)$ is valid on all Kripke frames

▲ロト ▲圖ト ▲画ト ▲画ト ▲画 - のへで

#### **Fact:** If $\varphi \to \psi$ is valid then $K\varphi \to K\psi$ is valid

▲口▶ ▲御▶ ▲注▶ ▲注▶ ▲注 ● のへで

### **Fact:** $K(\varphi \rightarrow \psi) \rightarrow (K\varphi \rightarrow K\psi)$ is valid on all Kripke frames.

▲口▶ ▲御▶ ▲注▶ ▲注▶ ▲注 ● のへで

#### **Fact:** $\varphi \leftrightarrow \psi$ is valid then $K\varphi \leftrightarrow K\psi$ is valid

Eric Pacuit and Rohit Parikh: Introduction to Formal Epistemology, Lecture 1

▲口▶ ▲御▶ ▲注▶ ▲注▶ ▲注 ● のへで

#### Definition

A model formula  $\varphi$  corresponds to a property P (of a relation in a Kripke frame) provided

### $\mathcal{F} \models \varphi \text{ iff } \mathcal{F} \text{ has } P$

#### Definition

A model formula  $\varphi$  corresponds to a property P (of a relation in a Kripke frame) provided

### $\mathcal{F} \models \varphi \text{ iff } \mathcal{F} \text{ has } P$

Modal Formula	Corresponding Property
Karphi ightarrow arphi	Reflexive

#### Definition

A model formula  $\varphi$  corresponds to a property P (of a relation in a Kripke frame) provided

$$\mathcal{F} \models arphi$$
 iff  $\mathcal{F}$  has  $P$ 

Modal Formula	Corresponding Property
$K \varphi  ightarrow \varphi$	Reflexive
	Transitive

#### Definition

A model formula  $\varphi$  corresponds to a property P (of a relation in a Kripke frame) provided

$$\mathcal{F} \models \varphi$$
 iff  $\mathcal{F}$  has  $P$ 

Modal Formula	Corresponding Property
$K\varphi  ightarrow \varphi$	Reflexive
Karphi  ightarrow KKarphi	Transitive
	Euclidean

#### Definition

A model formula  $\varphi$  corresponds to a property P (of a relation in a Kripke frame) provided

$$\mathcal{F} \models \varphi$$
 iff  $\mathcal{F}$  has  $P$ 

Modal Formula	Corresponding Property
$K \varphi  ightarrow \varphi$	Reflexive
Karphi  ightarrow KKarphi	Transitive
$\neg K \varphi \to K \neg K \varphi$	Euclidean
	Symmetric

#### Definition

A model formula  $\varphi$  corresponds to a property P (of a relation in a Kripke frame) provided

$$\mathcal{F} \models arphi$$
 iff  $\mathcal{F}$  has  $P$ 

Modal Formula	Corresponding Property
$K \varphi  ightarrow \varphi$	Reflexive
Karphi  ightarrow KKarphi	Transitive
$\neg K \varphi  ightarrow K \neg K \varphi$	Euclidean
$arphi  ightarrow {\it KL} arphi$	Symmetric
	Serial

## The Logic S5

The logic S5 contains the following axioms and rules:

$$\begin{array}{ll} Pc & \text{Axiomatization of Propositional Calculus} \\ K & K(\varphi \rightarrow \psi) \rightarrow (K\varphi \rightarrow K\psi) \\ T & K\varphi \rightarrow \varphi \\ 4 & K\varphi \rightarrow KK\varphi \\ 5 & \neg K\varphi \rightarrow K\neg K\varphi \\ MP & \frac{\varphi & \varphi \rightarrow \psi}{\psi} \\ Nec & \frac{\varphi}{K\psi} \end{array}$$

#### Theorem

**S5** is sound and strongly complete with respect to the class of Kripke frames with equivalence relations.

## The Logic S5

The logic S5 contains the following axioms and rules:

$$\begin{array}{ll} Pc & \text{Axiomatization of Propositional Calculus} \\ K & K(\varphi \rightarrow \psi) \rightarrow (K\varphi \rightarrow K\psi) \\ T & K\varphi \rightarrow \varphi \\ 4 & K\varphi \rightarrow KK\varphi \\ 5 & \neg K\varphi \rightarrow K \neg K\varphi \\ MP & \frac{\varphi & \varphi \rightarrow \psi}{\psi} \\ Nec & \frac{\varphi}{K\psi} \end{array}$$

#### Theorem

**S5** is sound and strongly complete with respect to the class of Kripke frames with equivalence relations.

### Multi-agent Epistemic Logic

The Language:  $\varphi := p \mid \neg \varphi \mid \varphi \land \psi \mid K \varphi$ 

Kripke Models:  $\mathcal{M} = \langle W, R, V \rangle$  and  $w \in W$ 

**Truth**:  $\mathcal{M}, w \models \varphi$  is defined as follows:

### Multi-agent Epistemic Logic

The Language:  $\varphi := p \mid \neg \varphi \mid \varphi \land \psi \mid K_i \varphi$  with  $i \in \mathcal{A}$ 

**Kripke Models**:  $\mathcal{M} = \langle W, \{R_i\}_{i \in \mathcal{A}}, V \rangle$  and  $w \in W$ 

**Truth**:  $\mathcal{M}, w \models \varphi$  is defined as follows:

# Multi-agent Epistemic Logic

- $K_A K_B \varphi$ : "Ann knows that Bob knows  $\varphi$ "
- ►  $K_A(K_B \varphi \lor K_B \neg \varphi)$ : "Ann knows that Bob knows whether  $\varphi$
- ¬K<sub>B</sub>K<sub>A</sub>K<sub>B</sub>(φ): "Bob does not know that Ann knows that Bob knows that φ"

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose that Ann receives card 1 and card 2 is on the table.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose that Ann receives card 1 and Bob receives card 2.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose that Ann receives card 1 and Bob receives card 2.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose that Ann receives card 1 and Bob receives card 2.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose that Ann receives card 1 and Bob receives card 2.

 $\mathcal{M}, w \models K_B(K_A H_1 \vee K_A \neg H_1)$ 

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose that Ann receives card 1 and Bob receives card 2.

 $\mathcal{M}, w \models \mathsf{K}_{\mathsf{B}}(\mathsf{K}_{\mathsf{A}}\mathsf{H}_1 \lor \mathsf{K}_{\mathsf{A}} \neg \mathsf{H}_1)$ 

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose that Ann receives card 1 and Bob receives card 2.

 $\mathcal{M}, w \models \mathcal{K}_{\mathcal{B}}(\mathcal{K}_{\mathcal{A}}\mathcal{H}_{1} \vee \mathcal{K}_{\mathcal{A}} \neg \mathcal{H}_{1})$ 

Ann would like Bob to attend her talk; however, she only wants Bob to attend if he is interested in the subject of her talk, not because he is just being polite.

There is a very simple procedure to solve Ann's problem: *have a* (*trusted*) friend tell Bob the time and subject of her talk.

Is this procedure correct?

Ann would like Bob to attend her talk; however, she only wants Bob to attend if he is interested in the subject of her talk, not because he is just being polite.

There is a very simple procedure to solve Ann's problem: *have a* (*trusted*) friend tell Bob the time and subject of her talk.

Is this procedure correct? Yes, if

- 1. Ann knows about the talk.
- 2. Bob knows about the talk.
- 3. Ann knows that Bob knows about the talk.
- 4. Bob *does not* know that Ann knows that he knows about the talk.
- 5. And nothing else.
